

ENERGY SAVING TIPS FOR YOUR FACILITY

Use Natural Sunlight

Turn off lights in unused rooms and use natural sunlight instead of overhead lighting. Lighting consumes close to 35% of all electricity used in commercial buildings.

Start An Energy Team

Establish an energy team at your business to meet your energy efficiency goals. Make energy efficiency a team sport.

Use Advanced Power Strips

Electronic devices continue to use power, even when they are turned off. Advanced power strips save energy by shutting the power off completely when plugged-in devices are turned off.

Turn Off Computer Equipment

Put computers in sleep mode when you step away and turn off computers at the end of the day. At night, during off hours, only 36% of desktop computers get turned off and 95% of laptop computers remain plugged in.

Invest In LED Lighting

Not only will LED lights cost less and save more energy, they also last longer, require lower maintenance, and improve the overall lighting quality of the room.

Invest In A Smart Thermostat

Smart thermostats are able to detect when employees are working and activate the away mode after business hours. Many smart thermostat users experience energy savings of 10-15% annually!

Use ENERGY STAR® Products

Using ENERGY STAR certified products can help save money on operating costs while reducing energy use without sacrificing performance. These products use less energy and will help you save money over time!

Consolidate Office Equipment

Office equipment is a silent drain on your electricity resources. Disconnect or remove any unused printers, scanners or fax machines. Enable your multifunction devices to go into standby after 15 minutes of idle time for additional savings.
